

# Commercial Strategy, Sales Targets & Growth Playbook

Complete guide covering ICP, outreach channels, use cases, pricing, and revenue roadmap

## 1. VALUE PROPOSITION

### Core Positioning & One-Sentence Pitch

**The Pitch:** *"SentinelOps is the human-in-the-loop control plane that sits between autonomous AI agents and consequential actions — enforcing policies, routing approvals to Slack, and logging tamper-proof audits before the agent acts."*

## 2. TARGET AUDIENCE

### Ideal Customer Profiles (ICP)

|                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                            |

## 3. PRIMARY USE CASES

### Where & How Customers Use SentinelOps

| Use Case               | The Consequential Action                                    | SentinelOps Rule / Policy Enforced                                        | Outcome                                         |
|------------------------|-------------------------------------------------------------|---------------------------------------------------------------------------|-------------------------------------------------|
| AI Sales & SDR Bots    | Sending cold emails, applying discounts in Stripe/CRM       | Max 20% discount limit; block unverified lead domains                     | Protects brand reputation & stops pricing abuse |
| Finance & Billing Bots | Processing vendor invoices, paying out refunds              | Payments > \$500 require human CFO sign-off via Slack                     | Zero unauthorized wire transfers or fraud       |
| DevOps & Cloud Bots    | Deploying releases, modifying databases, deleting cloud VMs | Block destructive SQL commands on production; 4-eyes approval on releases | Zero accidental outages or database drops       |
| Customer Support Bots  | Issuing refunds, updating sensitive user account settings   | Quarantine agent automatically if user reports prompt injection           | Contains compromised agents instantly           |

#### 4. SALES & OUTBOUND FUNNEL

### How to Reach & Close Paying Customers

**A. Product-Led Growth (Bottom-Up)**

- **Hook:** Developers install `pip install sentinelops-ai` and use the `@sentinel.guard` decorator in 3 lines of code.
- **Freemium:** Free tier (5 agents, 1k events/mo) to get embedded in their codebase.
- **Paywall Trigger:** Upgrades to \$49/mo Pro when they need unlimited agents, Slack approvals, or team seats.

**B. Outbound Direct Outreach (Top-Down)**

- **Targets:** VP of Engineering, Head of AI, CISO, AI Startup Founders.
- **Channels:** LinkedIn DMs, cold email, Twitter/X AI builders.
- **Offer:** *"We built a 3-line drop-in guardrail for your agents so your compliance team signs off on your launch."*
- **Demo:** 15-minute live screen share showing the demo sales bot triggering an approval request.

#### 5. PRICING & PACKAGING

### Monetization Structure

| Plan              | Price            | Target Buyer                         | Core Features                                                                               |
|-------------------|------------------|--------------------------------------|---------------------------------------------------------------------------------------------|
| Developer (Pilot) | \$0 / Free       | Indie hackers & hobbyists            | Up to 5 agents, 1,000 events/mo, Python SDK, Community support                              |
| Pro (Growth)      | \$49 / month     | Seed / Series A startups             | Unlimited agents, Slack approval integration, Custom policy rules, 90-day audit retention   |
| Team / Scale      | \$199 / month    | Mid-market SaaS companies            | Multi-operator roles, 4-eyes approval, Webhooks, Priority SLA, 1-year audit logs            |
| Enterprise        | \$1,500+ / month | Regulated enterprises (Banks/Health) | SAML SSO, SCIM provisioning, Hash-chained cryptographic compliance vault, Dedicated support |

#### 6. 30-DAY REVENUE EXECUTION PLAN

### Immediate Action Roadmap

**Week 1: Foundations**

-  PyPI package live (`sentinelops-ai`)
- Publish LinkedIn company page
- David sets up ABN + Stripe AU
- Post launch video on LinkedIn

**Week 2-3: Outreach**

- Direct message 30 AI agent founders on LinkedIn
- Post on Reddit (r/LangChain, r/LocalLLaMA)
- Get 5 external developers using the SDK
- Collect first testimonials & feedback

**Week 4: First Revenue**

- Convert 2 pilot users to \$49/mo Pro
- Launch on Product Hunt & Hacker News (Show HN)
- Reach first \$500 MRR milestone
